

project 3 proposal

des341 - ashley heeke

project 3 concepts/ideas

01. taking all (or a good amount/selection) of the albums on Apple Music and collaging them together but doing so by color coordinating them by album cover..users can hover over any random album and maybe it plays a song from that album as a preview?
- 02.

components

- ★ color coordinating
- ★ collaging albums together
- ★ hovering over albums to reveal “sneak peak” of a song from that album
- ★ maybe make albums clickable linked to information about that artist?

timeline

- ★ march 1st - develop outline + create folder(s) for images to be used & color coordinate by album cover + plan how many albums needed for webpage
- ★ march 3rd - start laying out images and collaging + playing with hover effect & adding song to play?
- ★ march 8th - continue adding album images + editing & adding hover effect
- ★ march 10th - finalizing layout of images + begin adding clickable link to info maybe? + test
